Safety Information:

FIRE SAFETY

Like all buildings, hotels can have fires. Plan what to do when you check in. You won't have time to plan during a fire.

FIRST - Find two exits nearest your room. Be sure they are unlocked and unblocked.

THEN - Count doors between your room and exits so you'll have a reference point if it's smoky.

If fire is in your room, get out and close the door. Once out, report the fire.

If the fire is not in your room, leave if you can. First feel your door. If it's cool, open it slowly and go to the nearest exit. Crawl in smoke, fresh air will be at the floor. Take your keys so you can go back if you can't use your exits.

If your room door is hot, don't open it. Your room may be the safest place to be. Seal all cracks with wet towels. Shut off fans and air conditioner. Signal at your window. Call the fire department and wait to be rescued.

WHEN YOU HEAR AN ALARM. ACT. DON'T INVESTIGATE!

SECURITY PROCEDURES

DOUBLE LOCKS AND CHAINS

For additional security, utilize the deadbolt lock provided on your dear upon entering and push in the button on the lock. This will prevent the door from being opened by a regular room key. As. an additional precaution, please secure the safety chain.

ADMITTANCE - Do not admit persons to your room without first making identification. If there is any doubt about the person's identity, please contact the front desk.

KEYS - Please safeguard your key. Be sure to leave it with the front desk upon your departure. Do not leave your key in your room or in the door. Do not give your key to others.

TORNADO SAFETY

Tornado Watch means that severe weather is possible. Keep alert! Listen to the radio or TV for national weather service bulletins. Prepare to take shelter in the event of a tornado warning.

Tornado Warning means that a tornado has been detected by radar or reported by trained spotters. If it is in your area, take shelter immediately. You must act quickly when a tornado warning is issued. Stay calm, but move to safety fast.

Wherever you are, always ...

- Get low to the ground - crouch or lie flat
- Protect your head - get in the bathtub and cover up with a blanket or pillows.
- Take cover close to the center of the building with no outside walls - on the lowest floor and in a confined space. • Stay away from windows - broken glass is the most dangerous kind of flying debris.
- Stay clear of - doors, outside walls, heavy objects, corridors, long span rooms, or auditoriums.

Local television stations are primary sources of local news and weather information. Please refer to the TV listing in this directory or in your room.

Safety Information:

HURRICANE SAFETY

A hurricane is a severe tropical storm, that forms in the southern Atlantic Ocean, Caribbean Sea, Gulf of Mexico, or in the eastern Pacific Ocean. Hurricanes need warm tropical oceans, moisture, and light winds above them. If the right conditions last long enough, a hurricane can produce violent winds, incredible waves, torrential rains, and floods.

Hurricanes rotate in a counter-clockwise direction around an "eye." Hurricanes have winds at least 74 miles per hour. There are on average six Atlantic hurricanes each year; over a three-year period, approximately five hurricanes strike the United States coastline from Texas to Maine.

When hurricanes move onto land, the heavy rain, strong winds, and heavy waves can damage buildings, trees, and cars. The heavy waves are called a storm surge. Storm surge is very dangerous and a major reason why you MUST stay away from the ocean during a hurricane warning or hurricane.

Basic Hurricane Safety Actions

- Know if you live in an evacuation area. Know your home's vulnerability to storm surge, flooding, and wind. Have a written plan based on this knowledge.
- At the beginning of hurricane season (June 1), check your supplies, replace batteries, and use food stocks on a rotating basis.
- During hurricane season, monitor the tropics. Monitor **NOAA Weather Radio.**
- If a storm threatens, heed the advice from local authorities. **Evacuate if ordered.**
- Execute your family plan.

Watch vs Warning - KNOW THE DIFFERENCE

A HURRICANE WATCH issued for your part of the coast indicates the possibility that you could experience hurricane conditions within 36 hours. This watch should trigger your family's disaster plan, and protective measures should be initiated, especially those actions that require extra time such as securing a boat, leaving a barrier island, etc.

A HURRICANE WARNING issued for your part of the coast indicates that sustained winds of at least 74 mph are expected within 24 hours or less. Once this warning has been issued, your family should be in the process of completing protective actions and deciding the safest location to be during the storm.
